## Scopenso Cardiaco, migliorare presa in carico e accesso a cure

🕒 Ottobre 21, 2022 📰 Quotidiano Net

Roma, 21 ott. (askanews) – Lo scopenso cardiaco colpisce circa 15 milioni di persone in Europa, con una prevalenza dell'1-2% ma che supera il 10% dopo i 70 anni. Una patologia cronica con nel 50% dei casi, esito fatale entro cinque anni dalla diagnosi. Che in Italia è la causa principale di ospedalizzazione degli over65 anni con un impatto non solo clinico, ma anche sociale ed economico molto rilevante. Se ne è discusso in un webinar dedicato alla situazione della patologia in Veneto nell'ambito di una serie di tavoli a livello regionale organizzati da Motore Sanità, con il contributo incondizionato di Boehringer Ingelheim ed Eli Lilly.

Claudio Bilato – Presidente dell' Associazione Nazionale Medici Cardiologi Ospedalieri Regione Veneto: "Lo scopenso è quello che si chiama un'epidemia crescente: i pazienti crescono anno dopo anno. All'incirca credo che attualmente le prevalenza scopenso in Italia ma anche nei Paesi occidentali e anche nel Veneto si aggiri tra l'1.8% e il 2%, Ovviamente la percentuale aumenta moltissimo nei pazienti che sono anche di età avanzata. Aumenta con l'età. Altra cosa importante lo scopenso è la causa principale di ricovero e quindi è sicuramente una patologia estremamente importante. Nel Veneto abbiamo circa attualmente 70.000 pazienti che sono affetti da scopenso cardiaco e ogni anno a questo numero si aggiungono circa 2/3mila ulteriori soggetti.
