Notes: Health grade = Health score (A) - Health risk penalties (B)

A: Health score metrics: 1. Mortality by communicable, non-communicable diseases and injuries; 2. Life expectancy at the defining age of birth, childhood, youth and retirement; 3. Probability to survive neonatal, into young adulthood and retirement stages. B: Health risk penalties: 1. Behavioral/endogenous factors such as high incidences of population with elevated level of blood pressure, blood glucose and cholesterol, prevalence of overweight, tobacco use, alcohol consumption, physical inactivity and childhood malnutrition, as well as mental health and basic vaccination coverage; 2. Environmental/exogenous factors such as population with access to clean air, water and sanitation facilities. Of the more than 200 economies evaluated; 169 had enough data to be included in the final outcome; Final index only included those with 0.3 million (rounded) population or more. Those scored above 60 are displayed.
